

TECHNICAL SKILLS

- **Languages:** TypeScript, Go
- **Frameworks:** React, React Native, Next.js, Express.js
- **Database & Storage:** PostgreSQL, Supabase S3 Compatible Object Storage
- **Infrastructure:** Docker, VPS, Nginx, Supabase, Linux, NixOS

EDUCATION

B.E. Informatics Engineering
Sumatera Institute of Technology

2023 - Present
GPA: 3.63 / 4.00

PROJECTS

- **Margodadiku (GitHub Repository)** — *Stack: TypeScript, React Native, Deno, PostgreSQL*
A mobile attendance app for village officials with GPS-based location verification.
 - Implemented precise location verification using the Expo GPS API.
 - Architected a *serverless* backend using Deno HTTP Server to execute low-latency operations via Supabase Edge Functions.
 - Utilized the Haversine formula to calculate and validate the user's distance against a predefined geographical center.
- **Web Desa Pemerihan (GitHub Repository)** — *Stack: TypeScript, React, Next.js, Supabase S3, PostgreSQL*
A full-stack administrative portal for a rural village, digitizing local services and public information.
 - Developed a rural administrative portal using React and Next.js, leveraging *Server-Side Rendering* (SSR) for optimal SEO performance.
 - Integrated PostgreSQL and Supabase S3 Compatible Object Storage to manage relational data and static media, including article assets, local product catalogs, and tourism imagery.
 - Streamlined local bureaucratic workflows through a web-based digital service connected directly to the PostgreSQL database.
